Team name:
EECS-ellent

Members:
Keenan Tullis: uniqname- keenanjt; github - keenanjt33
Emily O'Connor: uniqname- eoconn ; github - emilyocon
Madi Sabo: uniqname- sabomj ; github - sabomj
Alex Wilf: uniqname- abwilf ; github - abwilf

Contributions:
- Keenan Tullis: NSDate stuff, algorithm, calc free time until due implementation
- Emily O'Connor: Implemented delete functionality, initial algorithm implementation, single task view implementation, team organization
- Madi Sabo: Implemented delete functionality, initial algorithm implementation, single task view implementation
- Alex Wilf: Organized team, implemented saving to disc, made app blueprint, majority of UI

Device and orientation:
- iPhone 6 - 4.7 inch
- Orientation: vertical

Reach goals:
- Swipe between days in daily schedule viewer
- Refresh page
- Support tasks with smaller time increments (right now we round to the nearest hour)
- Refine algorithm
- Appearance

Anything else we should be aware of while grading:
- We reached a sticking point that we were unable to resolve before the deadline. The daily task view is not displaying properly.
- We hope to have these bugs fixed as soon as possible and hope that these future revisions can be taken into account when grading the core implementation.

Project feedback:
- The core implementation proved to be quite challenging. We put as much work as we could during the time that we had and hope that with a little extra time we can fully implement the core project.
